

Week 8: Data Review

Preparation:

Each student will research their question/topic – finding evidence for the context, methods used previously to try and address/solve that problem and identify areas of further research/unanswered questions. The more preparatory work done before class, the more useful this session will be to everyone.

Investigate data:

1. In a logical format tailored to the questions the student would like addressed by the group, each person present data obtained for their topic/question
2. Group discuss any questions/lack of clarity found by the student
3. Group discuss/develop further questions for student to answer

Each student will have approximately 10 minutes to discuss the data with peers.
