Abstract: A checklist of the beetles (Coleoptera) of Colorado has been compiled mainly from published records, from specimens in the C. P. Gillette Museum of Arthropod Diversity at Colorado State University and from specimens in other major collections in the United States. The list contains the scientific name of beetle species and the counties in Colorado where the species has been recorded. Ninety-one families of beetles, including more than 1260 genera and over 3500 species are also included.

*Owing to its meeting of different faunae in Colorado, the State as a whole is extraordinarily rich in species.*  
T. D. A. Cockerell, 1893

### **Introduction**

Concerns about biodiversity are rising dramatically, yet we are without the most basic prerequisite for its understanding and conservation; an inventory of the biota. Insect species comprise five to ten times the number of other plant and animal species combined, and because of this immense number they represent a major challenge in biosystematics sciences.

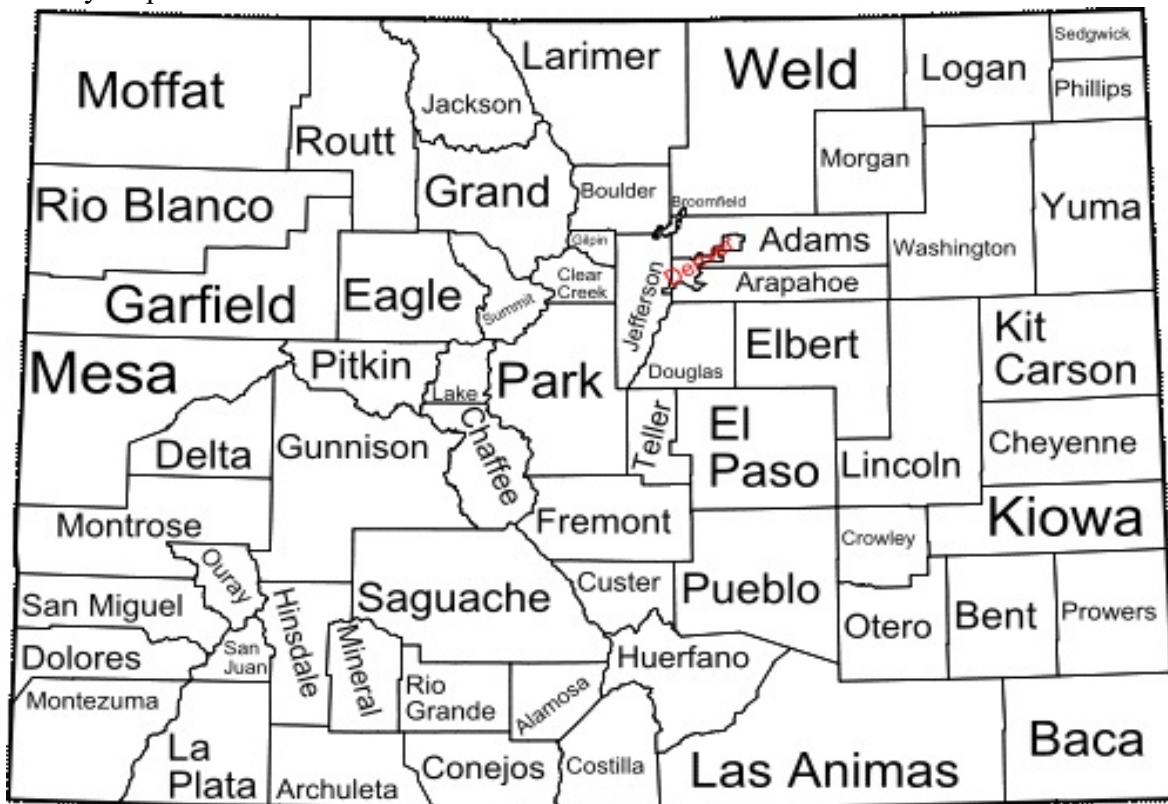

Coleoptera, one of the major assemblages of species, is a major impediment to understanding the biodiversity of Colorado. I must agree with T. Cockerell that owing to the meeting of different faunal areas in Colorado, the State as a whole is extraordinarily rich in species, with over 3500 species divided into more than 1200 genera and 91 families.

### **Description of the state:**

Colorado, with an area of 26,998,930 ha (103,922 sq. miles), is the 8<sup>th</sup> largest state in the United States and includes three-quarters of the nation's land above 3,048 m (10,000 ft.). The state can be divided into three distinct natural regions; 1) the western extension of the Great Plains that encompasses approximately the eastern 40 percent of the state, 2) the Mountain Region that rises abruptly from the Plains and encompasses the central third of the state, and 3) the Plateau Region that gradually descends from the mountains to the western border with Utah, and occupies about the western third of the state. From the eastern border with Nebraska and Kansas at an elevation of about 1,066 m (3,500 feet), the Plains Region rises gradually upward to the base of the Rocky Mountains. This area was once comprised primarily of shortgrass prairie, but has been converted to other uses, primarily agricultural, by humans. Along the Front

Range, the grassland merges with ponderosa pine and pinyon pine-juniper woodlands or shrublands at the base of the mountains. The Mountain Region ranges in elevation from approximately 5,000 ft to more than 12,000 feet (52 mountain peaks exceed 14,000 feet) and occupies the central third of the state. It is comprised mainly of dense forests of Engelmann Spruce, Douglas-fir, subalpine fir, lodgepole pine, aspen and, at the higher elevations, vast areas of alpine tundra. Less frequently, but common in this zone are white fir, bristlecone pine, blue spruce and corkbark fir. The Rocky Mountains west of the Continental Divide descend to broad tablelands and mesas covered with big sagebrush and other semi-arid species. The Colorado River and its tributaries dissect the Plateau Region in numerous rocky canyons and arid valleys. The higher elevations are clothed with pinyon pine-juniper woodlands.

## Methods

Evidently, there has not been any attempt to prepare a checklist of the Coleoptera of Colorado since H. P. Wickham published his checklist in 1902. Obviously, Wickham's checklist is obsolete but still contains interesting information for future studies. In addition to a checklist, Wickham also provides an interesting history of collecting Coleoptera in Colorado, starting with the activities of C. Thomas in 1869 and including the work of W. L. Carpenter, P. R. Uhler, F. H. Snow, C.P. Gillette, J. L. LeConte, T. D. A. Cockerell, G. H. Horn and many others.

The present checklist was prepared by examination of the C. P. Gillette Museum collection housed at the Colorado State University, by the use of numerous recent publications, and by using the large database "SCAN" Symbiota Collections of Arthropods Network which is available at: [scan-bugs.org/portal/checklist/checklist.php?cl=1](http://scan-bugs.org/portal/checklist/checklist.php?cl=1) or [scan-bugs.org/portal/collections/index.php](http://scan-bugs.org/portal/collections/index.php).

This online database contains distribution records from over 225 collections of natural history museums. Each record provides the complete collection data for each species included in the database. Localities were checked in "Geographical Names Information System (GNIS), State of Colorado". Each record provides the complete collection data for each species included in the database. Numerous records can be found in the database. The collections where distributional information was obtained for this checklist are listed below.

C. P. Gillette Museum collection is listed as (R125,GM).

BYU Museum collection is listed as (R125, BYU).

Denver Museum of Natural History is listed as (R125,DM).

W. F. Barr Collection is listed as (R125,BC) and.

University of Colorado Museum of Natural History is listed as (R125,UC).

In the present checklist Wickham's records are only included when they add important distributions or where a species is known from Colorado but the published distribution lacks important information. The reference number for Wickham's records is (R10). Users of this checklist should be cautious when referring to data from this number. In addition, numerous localities in Wickham's catalog refer to canyons, streams, valleys, mountains etc that may occur in several counties. These records had to be omitted.

The arrangement and classification of the family names follows the order given in "American Beetles" by Arnett *et al.* (2001, 2002). The family names, the generic and the species names are listed alphabetically. Subfamily, subgenera and tribes are not used. That information is readily available in "American Beetles". The numbers preceding the family name are those used in "American Beetles". (American Beetles, edited by R. Arnett and M. C. Thomas (2001), Volume 1, CRC press, 443 pp.; Volume 2, edited by R. Arnett, M. C. Thomas, P. E. Skelley and J. H. Frank, CRC press, 859 pp.).

After each species name is one to several Colorado counties where the species was recorded. In order to provide a reference where the distribution can be checked, the reference is listed as "(R\_\_)". Sometimes the list of counties comes from more than one reference. In that case, a semicolon is used to separate each group of counties and the reference number.

Many literature reports list only the state and these are listed as "State record only (R\_\_)". Records

listed as (GM) refer to species examined in the C. P. Gillette collection.

In order to avoid constantly repeating the references I have numbered each reference used. Each reference has a number indicated by “(R\_\_\_)”. One hundred and sixty references were used.

It is somewhat surprising that numerous recent authors while preparing revisions, checklists or other taxonomic treatments have not included a reference to the Wickham (1902) checklist of the Coleoptera of Colorado. In fact, not one of the 132 families treated in “American Beetles” have a reference to Wickham (1902). Over 400 species of beetles and 58 families were recorded from Colorado by Wickham but the taxonomic knowledge at the time reduced the usefulness of the checklist.

The Curculionidae portion of this checklist is an abbreviated copy of the checklist of the weevils of Colorado which was published by Colorado State University a few years ago (R160). Since the literature of the earlier checklist differs slightly from that of the current copy the literature citation, the “(R\_\_\_)” is omitted in this checklist for this family only.

Checklist of the Beetles (Coleoptera) of Colorado

**18. AGYRTIDAE**

The primitive carrion beetles

*Apteroloma* Hatch

*tenuicorne* (LeConte)

State record only (R27).

**11. AMPHIZOIDAE**

Trout stream beetles

*Amphizoa* LeConte

*carinata* Edwards

Conejos (R8).

*lecontei* Matthews

Clear Creek, Garfield, Gunnison (R10).

Note: Larvae and adults occur in cool or cold, swift-flowing streams, clinging to driftwood or other debris or under rocks or attached to roots of stream side vegetation.

**70. ANOBIIDAE**

The death watch beetles and spider beetles

*Caenocara* Thomson

*scymnoides* LeConte

State record only (R47).

*Episernus* Thomson

*champlaini* (Fisher)

El Paso (R47).

*trapezoideus* (Fall)

State record only (R47).

*Ernobius* Thomson

*gracilis* LeConte

Conejos (R47); Costilla (R10).

*tristis* LeConte

Conejos, Huerfano (R47); Costilla (R10).

*Gastrallus* Jacquelin du Val

*marginipennis* LeConte

Conejos (R47); Costilla (R10).

Notes: Collected on oak and from stem of *Clematis ligusticifolia*.

*Hadrobregmus* Thomson

*alternates* (Fall)

State record only (R47).

*americanus* (Fall)

Ouray (R47).

*Mezium* Curtis

*americanum* Laporte

Boulder (R125,UC).

*Microbregma* Seidlitz

*emarginatum emarginatum* (Duftschmid)

State record only (R47).

*Ozognathus* LeConte

*dubius* Fall

State record only (R47).

*Priobium* Motschulsky

*punctatum* (LeConte)

State record only (R47).

*Ptilinus* Mueller

*lobatus* Casey

State record only (R47).

*Stegobium* Motschulsky

*paniceum* (Linnaeus)

State wide.

Notes: Drugstore Beetle. Feeds in a wide variety of stored organic materials of plant and animal origin.

*Tricorynus* Waterhouse  
*californicus concolor* White  
State record only (R47).

*Xestobium* Motschulsky  
*squalidium* LeConte  
Jackson (R10).

*Xyletinus* Latreille  
*fuscatus* Leconte  
State record only (R47); Costilla, El Paso (R10).  
Notes: Collected from dead branches.

*rotundicollis* Whit.  
State record only (R47).

## 117. ANTHICIDAE

The ant-like flower beetles

*Amblyderus* LaFerte-Senectère  
*pallens* (LeConte)  
Alamosa, Bent (R61).  
Notes: Taken on sand dunes.

*triplehorni* Weissmann and Kondratieff  
Alamosa (R61).  
Notes: Taken on sand dunes. Endemic to Great Sand Dunes National Monument.
