ABSTRACT

A list of arthropod and other invertebrate codes for the Pawnee Site is given.

INTRODUCTION

Codes have been assigned to arthropods, annelids and nematodes collected on the Pawnee Intensive Study Site in 1970, 1971, and 1972. Collections were made in various ways including those described by Dickinson and Leatham (1970) and Lloyd and Grow (1971) for aboveground and soil insects respectively, plus sweep nets, hand catching, pit trapping and Berlese extraction of cow dung.

Part I involves 4 letters coding, first two letters of a genus and first two letters of a species. If the species is unknown, letters SP substitute it. Furthermore, within the same genus if species are definitely different but correct identification was not possible due to lack of existing literature, SP letters are assigned numbers. In the second column all the previous codes have been listed followed by species, family and group (order or class or phylum).

Part II involves unknown genus and species till date which probably will be identified at some later date. The code involves first 4 letters of a family or order followed by a number assigned to each species within that genus or higher taxon.

Part III covers all the codes used during 1970 and 1971. All these codes are arranged alphabetically followed by other codes, species, family and group.

All the codes are arranged alphabetically. Identification of all the organisms was by specialists.

•
